

FOIL RECYCLING

Thank you for bringing us your aluminium foil. Please help us to make it easy to recycle following these guidelines. Many things look like aluminium foil but are not and cannot be recycled.

How to tell if foil really is aluminium foil:

It does not make a crinkly sound when compressed. When squeezed, it does not spring back into shape but stays compressed.

Examples of things that look like aluminium foil but are not foil and cannot be recycled:

- Silver crisp packets
- Silver bags of teabags
- Silver foil-type packs of medical pills, which you can pop the pills out of
- Real coffee bags

These things are plastic or a mixture of plastic and foil. Our volunteers have to pick them out by hand so it would really help if they were not included. Thank you.
